

Multi-Topic Document for Semantic Search and Chunking

Cricket:

Cricket is a bat-and-ball sport played between two teams of eleven players.
Formats include Test, ODI, and T20 cricket watched by millions worldwide.
The IPL is the largest T20 league, featuring star players and huge crowds.
Batsmen score runs; bowlers aim for wickets through pace, swing, or spin.
A century (100 runs) and a five-wicket haul are celebrated milestones.
World Cups, rivalries, and last-ball finishes make cricket emotionally powerful.

Farming and Agriculture:

Farming supplies food grains, vegetables, fruits, and raw materials nationally.
Farmers plough fields, sow seeds, irrigate crops, and harvest at the right season.
Rice, wheat, maize, cotton, and sugarcane are major crops in many regions.
Tractors, drip irrigation, and weather apps help improve yield and reduce waste.
Monsoon timing strongly affects crop success in rain-dependent agricultural zones.
Sustainable methods protect soil health, water tables, and long-term productivity.

Artificial Intelligence:

AI lets machines learn from data, recognize patterns, and support decisions.
Machine learning and deep learning power vision, speech, and language tasks.
Chatbots, recommendations, fraud alerts, and diagnostics rely on AI systems.
LLMs can summarize documents, answer questions, and assist with writing tasks.
RAG retrieves relevant text first, then generates answers grounded in sources.
Embeddings map text to vectors so semantically similar content can be retrieved.

Climate Change:

Climate change means long-term warming and shifting weather across the globe.
Fossil fuels release greenhouse gases that trap heat in Earth's atmosphere.
Impacts include floods, droughts, heatwaves, glacier melt, and habitat loss.
Renewable energy, reforestation, and efficiency policies aim to cut emissions.
International agreements encourage nations to limit temperature rise jointly.
Individual actions like reducing waste and saving energy also matter daily.

Space Exploration:

Space missions study planets, stars, and cosmic phenomena beyond Earth.
ISRO, NASA, ESA, and SpaceX launch satellites, rovers, and crewed flights.
Chandrayaan and Mars missions expanded scientific knowledge and national pride.
Satellites enable GPS, telecom, Earth imaging, and disaster response support.
Future plans include lunar research stations and human exploration of Mars.
Space technology often improves materials, medicine, and computing on Earth.

Health and Nutrition:

Balanced nutrition includes proteins, carbohydrates, fats, vitamins, and minerals.
Regular exercise strengthens the heart, muscles, bones, and mental well-being.
Drinking enough water, sleeping well, and managing stress support immune health.
Vaccination and hygiene prevent many infectious diseases in communities.
Public health programs promote awareness about diet, fitness, and disease prevention.
Healthy habits reduce risks of diabetes, obesity, and cardiovascular illness.
